WHAT WE DO

Sacrificial Anode Manufacturing

Houston Anodes manufactures aluminum and zinc sacrificial anodes using electromagnetic induction technology — a process that produces 100% homogeneous alloys with zero contamination and perfect density. Gas furnaces take 50% longer and produce anodes with up to 41% passive material. Our anodes last 40% longer.

Superior Technology

Electromagnetic induction melting — non-contact, no flames. 725 tons/month capacity.

Quality Assured

In-house ISO 17025 lab with Bruker Q8 spectrometer. Chemical analysis on every heat. NACE TM-0190 on every batch.

Highest Purity

Aluminum 99.9%, Zinc 99.99%, Indium 100%. Never melt scrap or recycled anodic material.

PRODUCTS

What We Deliver

Aluminum alloy anodes from 5 lbs to custom configurations. We also manufacture our own molds.

01

Platform Anodes

90°/45°/straight core. 180–1,250 lbs.

02

Bracelet Anodes

10"–30" dia. 22–265 lbs.

03

Pier, Piling & Ballast

Flush, stand-off, rod core.

04

Tank & Vessel

Heater treater, bowling ball, drum.

05

Hull Anodes

Zinc hulls. Navy: 35-yr life.

06

Custom

Any geometry to spec. Wind turbines.

MARKETS WE SERVE

Applications

- **Oil & Gas:** Deepwater platforms, subsea structures, pipelines, refineries, chemical plants
- **Offshore Wind:** Turbine foundations, monopiles. Delivered for Ocean Wind 1 (NJ) & Revolution Wind (RI)
- **Infrastructure:** Piers, pilings, harbor facilities, ballast systems
- **Industrials:** Heater treaters, tanks, vessels, drums
- **Defense (U.S. Navy):** Hull anodes with proven 35-year service life
