Who We Are

COMPANY OVERVIEW

Houston Anodes designs and manufactures aluminum and zinc sacrificial anodes in Houston, Texas. In-house ISO 17025 laboratory. Electromagnetic induction melting. Custom configurations from 5lbs to 1,650 lbs.

1,000+ Projects

Completed in the past five years across five continents.

Zero Claims

Not a single product claim in 49 years of operation.

35+ Year Life

Anodes made for the U.S. Navy with a proven 35-year service life.

Major Operators

Serving the world's Top energy companies across five continents

Our #1 Priority

SAFETY FIRST!

Houston Anodes runs a zero-harm operation. Every process, every shift. HSE is not a program. It is how we operate. The successful management of HSE is an essential part of our business model and corporate culture.

Employee Development

Ongoing training and development programs for technical skills and safety awareness at every level.

Safer Process

Induction melting eliminates open-flame exposure and dangerous manual hand-stirring with steel rods.

Zero Harm Culture

Every employee trained, every shift. Accident prevention as a job requirement, not a poster.

The Challenge

CORROSION NEVER SLEEPS

Metals extracted from their primary ore have a natural tendency to revert to that state under the action of oxygen and water. Corrosion is an electro-chemical process that threatens safety, production and the environment.

Corrosion generate

\$50B+

In annual global losses

800 HRS

Average downtime/year

How It Works

CATHODIC PROTECTION

Cathodic protection works by connecting a sacrificial anode to the structure. DC current flows from the anode to the steel. The steel becomes cathodic and stops corroding. The anode is consumed instead.

- The current results from the potential difference between two metals
- Causes a positive current to flow from the anode to the steel
- Surface of the steel becomes cathodic and does not corrode
- Requires: sacrificial anodes + direct welding to structure

What We Do

PREDICTABLE AND RELIABLE ASSET LIFE

We design, manufacture, and deliver high-quality aluminum and zinc sacrificial anodes using electromagnetic induction technology producing anodes that last 40% longer than conventional alternatives

RIGHT SPECS

Electromagnetic induction melting (not gas furnaces)

- ✓ Proprietary aluminum alloys
- ✓ High-purity zinc
- ✓ Custom material formulations
- ✓ Any core configuration

RIGHT WEIGHT

Weight ranges from 5lbs to custom configurations

- ✓ Light-durry (22 - 99 lbs)
- ✓ Medium-duty (100 - 400 lbs)
- ✓ Heavy-duty (401 - 1,650 lbs)
- ✓ Custom weights

RIGHT FIT

Application-specific designs for any infrastructure

- ✓ Platforms
- ✓ Subsea infrastructure
- ✓ Pipeline bracelets
- ✓ Piper/Piling and more+

SIX PRODUCT FAMILIES. ONE MANUFACTURER.

What We Deliver

PRODUCT PORTFOLIO

PLATFORM ANODES

- Offshore
- Structural

AL ZN

Who We Serve

MARKETS AND APPLICATIONS

MARINE AND OFFSHORE

- Oil Rigs
- Ship Building
- Port Facilities
- Offshore structures

WATER INFRASTRUCTURE

- Municipal Water Systems
- Cooling Towers
- Heat Exchangers

PIPELINES

- Underground Pipelines
- Subsea Pipelines

POWER GENERATION

- Power Plants
- Cooling Systems
- Electrical Infrastructure

STORAGE TANKS

- Water Storage Tanks
- Industrial Vessels
- Containment Systems

INDUSTRIAL FACILITIES

- Chemical Plants
- Refineries
- Manufacturing Facilities
